

ACTIVE INGREDIENT OPTIONS:

BROMETHALIN **CHLOROPHACINONE**
(Gunslinger®, Rampage™, CyKill™) (DoubleTap®)

ACTIVE INGREDIENT OPTIONS:

BROMADIOLONE **BRODIFACOUM**
(Revolver®, BootHill®) (Jaguar™, Havoc™)

ACTIVE INGREDIENT OPTIONS:

BROMADIOLONE **DIFETHIALONE**
(Revolver®, BootHill®, Hawk™, DeciMax™) (Renegade™, Hombre®, FastDraw®)

For clean out baiting or corrective action consider Cannon II® soft bait (Bromethalin).

Why do we rotate rodenticides?

While rodenticides are a key tool in managing rodent problems, use of one product or active ingredient doesn't provide enough control. A single bait won't appeal to all rodents, leaving some populations untreated. Target populations become genetically resistant to repeatedly used active ingredients, making single products less effective over time.

Rotating through a series of rodenticides, each with a separate set of active ingredients, can prevent resistance. With each new product, rodents become exposed to different active ingredients and a wider range of bait flavors, textures and scents.

To learn more about incorporating a bait rotation plan as an essential part of your rodent control program, contact your Animal Health International sales representative.
